RESEARCH BACKGROUND
UNDERLYING PROBLEM BEHIND DATA ASSURANCE

• Some of the biggest challenges we face as a society, such as managing the impacts of climate change, access to healthcare and reducing poverty, require data to be shared widely across sectors, organisations and between governments.

• However, data sharing is restricted because governments and organisations that could share or reuse data are unable to assess the trustworthiness of datasets or the data practices of other organisations. This is compounded by the acceleration in development and use of technology that draws on data collected and used without understanding its limitations. This is leading to a world that’s inequitable, and causing harm to people and communities. We are also missing opportunities to capitalise on the social, economic and environmental value that could be gained through greater trust in data flows.

• The Open Data Institute (ODI) believes the adoption of data assurance products and services should both reassure organisations which want to share or reuse data, fostering trust and sustainable behaviour change within those organisations or communities.
RESEARCH BACKGROUND

• The ODI knows that data assurance practices are at the heart of building confidence in the way that UK companies are run and scrutinised. The ODI expects to see high growth in demand for data assurance, as organisations grapple with the need to build confidence with customers, stakeholders and the public.

• The ODI commissioned Metia Group to undertake this research in order to build on the current understanding of the market from both supply and demand sides.

• The research aims to improve understanding of the challenges that businesses are facing, current products and services used to meet those challenges, and where there are gaps, to improve confidence and trust in their data and data practices.

• The market review is focused on business-to-business data assurance products which support and enable the responsible, trustworthy and ethical use, publication and sharing of data. The ODI is particularly interested in the demand and uptake of services including consultancy, audit type activities, digital software tools, certification and accreditation.
**KEY QUESTIONS ADDRESSED BY RESEARCH**

| Who are the key data assurance users (their personas and roles within different types of organisations)? | Where are the gaps in currently available services and products? Where does white space exist between user needs and current solutions? |
| What are the key user needs? What are the key business problems they need to solve? | Are there barriers to entry of data assurance products and services, and why? |
| How are they currently solving these problems? | What language do participants engage with in terms of how data assurance products and services are described? |
| What are the current levels of customer satisfaction when using existing solutions? | What is the current impact of data assurance products and services on trust in data and the trustworthiness of organisations? |

RESEARCH APPROACH AND METHODOLOGY EXPLAINED

RESEARCH APPROACH

• A multi-methodology approach including primary and secondary research

• Analysis of existing publicly available and ODI provided sources

• Fielding bespoke multi-country survey, investigating data holders’ appetite towards data assurance services and assurance providers’ offerings
  • Survey was fielded between 21<sup>st</sup> July 2022 and 7<sup>th</sup> August 2022

RESEARCH SCOPE

• Respondent scope: Professionals responsible for external data assurance (e.g. third-party, open data)

• Data assurance industry scope:
  • Data assurers (providers / supply side)
  • Data holders & Data users (demand side)

• Sample size: target sample 750; achieved sample 791

• Geographical scope: UK, Germany, France, US, Singapore

© Metia Group – Market Demand for Data Assurance Services report – May 2023
ABOUT THE TARGET SAMPLE
THE MAJORITY OF DATA ASSURANCE ACTIVITIES WORK WITH A BLEND OF INTERNAL AND EXTERNAL DATA IN EACH OF THE MARKETS SURVEYED

UK
- External data only: 10%
- Both internal and external data: 90%

US
- External data only: 8%
- Both internal and external data: 92%

GERMANY
- External data only: 13%
- Both internal and external data: 87%

FRANCE
- External data only: 23%
- Both internal and external data: 77%

SINGAPORE
- External data only: 7%
- Both internal and external data: 93%

THE MARKET CAN BE SEGMENTED INTO THREE CATEGORIES OF DATA ASSURANCE PLAYERS

External data assurance organisations have a primary function which sits within three distinct segments:

- **DATA ASSURANCE SERVICE PROVIDERS** are organisations offering data assurance products and services to other organisations.

- **DATA HOLDERS** are organisations using external data assurance services, in order to assure the quality and consistency of the data that organisations hold, and share with third parties.

- **DATA USERS** are organisations using external data assurance services in order to assure quality and consistency of the data that the company does not hold, but is shared by third parties and being used within or by the organisation.
DATA HOLDERS ARE THE LEADING CATEGORY IN EACH OF THE FIVE MARKETS

THE EXTERNAL DATA ASSURANCE MARKET IS IN ITS INFANCY, WITH STRONG POTENTIAL FOR FUTURE DEVELOPMENT

DEFINITION
Majority of the market understands the need for data assurance and associates it with security and protection. More education is needed around the potential for external data assurance, specifically focusing on externalisation of internal data and how it builds trust in and between organisations.

PERSONA
Well-educated millennial male tech professionals comprise the majority of the data assurance market. Coming from IT, Financial and Manufacturing industries, they are interested in mitigating data risk, complying to legal requirements and boosting trustworthiness of organisations.

MARKET STATE
The divide between internal and external data assurance is blurring. Businesses increasingly get their internal data ready for external use, even if they do not see an immediate requirement. The future is bright with dynamic growth, new product development and increasing flexibility.

WHITE SPACES
Current supply level does not fully meet the demand, creating space for both new entrants and product portfolio expansion, particularly in the data quality, governance and compliance space. Developed regions will see higher competition and stable growth, while new regions open space for exponential sales growth.

FUTURE DIRECTIONS
Looking ahead, data assurance suppliers should consider working in partnership with an independent body in order to boost their credibility in external data assurance. Suppliers also have the opportunity to respond better to the demands of the market in offering more flexible and adaptable services. There is also scope for greater price competition.
WHAT IS DATA ASSURANCE?
TRUSTWORTHINESS IS AT THE HEART OF DATA ASSURANCE

THE ODI DEFINES DATA ASSURANCE AS:

the process, or set of processes, that increase confidence that data will meet a specific need, and that organisations collecting, accessing, using and sharing data are doing so in trustworthy ways.

DATA ASSURANCE PRACTITIONERS HAVE A LESS CONCISE DEFINITION OF DATA ASSURANCE

that ranges from the simple association with security to a broader understanding of the business impact, capability and reputation attached to data assurance.

© Metia Group – Market Demand for Data Assurance Services report – May 2023
DATA ASSURANCE IS ASSOCIATED WITH QUALITY INFORMATION AND BUSINESS CONFIDENCE

The purpose of external data assurance goes beyond a statement from a third party that the contents of a report are true based on certain principles; it enhances confidence about the integrity of information and of underlying operational processes and improves the quality of an organisation's decision-making process.

UK, data holder

Data assurance means quality control on the data intake and structuring, guidelines and guardrails for responsible and effective use of the data, and safety and security of our most sensitive data and data providers' privacy.

US, data holder

62% of UK respondents identified as male. Less than 1% of the sample identified as transgender or non-binary.

Across the segments, data assurance is geared towards the male demographic. In geographies surveyed, Singapore (75%) and Germany (73%) are more male dominated, while USA and France see more female professionals in the field with 40% and 46% respectively.
MILLENNIALS CURRENTLY REPRESENT A MAJORITY OF THE DATA ASSURANCE WORKFORCE

The data assurance service providers skew towards Millennials with 27% of the sample comprised of 31 to 35 year olds, followed by 23% of 36 to 40 year olds.

The data holders have a somewhat more even age distribution, comprised of Millennials and Gen Zs, with 31 and 35 year olds and 36 to 40 year olds representing 21% of the sample each. Whilst 15% of the sample accounts for 26 to 30 year olds.

Data users are led by Millennials with 20% of the sample aged between 36 and 40 years. This segment sees a higher proportion of the older Gen X demographic, with 16% of the sample comprised of 41 to 45 year olds.

Q: What best describes your employment status? Please select one answer, N=791

© Metia Group – Market Demand for Data Assurance Services report – May 2023
Data assurance is a relatively new discipline, seeing a migration of professionals from other fields. One-third of respondents are seasoned professionals with over 15 years of overall career experience. A further 45% of the sample is represented by professionals with a career lasting between 5 and 15 years.

Data assurance, as a relatively newer field, sees a higher concentration of professionals with 3–5 years experience (31%) and 5–10 years experience (29%). Whilst those with 15+ years experience represent only 9%.

The US has the most seasoned data assurance professional, with 32% of respondents having more than 5-years experience.

IT, DATA MANAGEMENT AND DATA TRANSFORMATION ROLES ARE MORE PREVALENT THAN DATA ASSURANCE SPECIFIC JOB TITLES

Service providers: top 5 positions
- IT specialist/ manager/ engineer
- Data management/ data transformation project manager
- Data assurance specialist/ manager/ officer
- Data engineer
- Data scientist

Data holders: top 5 positions
- IT specialist/ manager/ engineer
- Data management/ data transformation project manager
- Data assurance specialist/ manager/ officer
- Data protection officer
- Data engineer

Data users: top 5 positions
- IT specialist/ manager/ engineer
- Data management/ data transformation project manager
- Data assurance specialist/ manager/ officer
- Data protection officer
- Data engineer

The job titles of service providers fall within specific standardised categories related to data.

~8% of the sample had non-data related job titles, including Owner, CEO, Senior Leadership and Consultant.

~16% of the sample had non-data related job titles, including Owner, CEO, Senior Leadership and Executives within Operations and Sales.

© Metia Group – Market Demand for Data Assurance Services report – May 2023
It is by far the most important industry where data assurance service providers operate. Finance related industries, including accounting and insurance, are more prominent in the UK and France, whilst in the USA and Germany there is a skew towards retail and consumer electronics fields. Singapore data assurers are divided between IT and Manufacturing / Engineering / Construction industries.

OVER A THIRD OF DATA ASSURANCE PROVIDERS COME FROM THE IT SECTOR

Source: Metia, Data Assurance Survey

Q: Please tell us about the industry sector you/ your company currently work in? Please choose the primary industry only. Please select one answer, N=141

INFORMATION TECHNOLOGY 35%
BANKING/FINANCIAL/INVESTMENT MNGMT 9%
MANUFACTURING/ENGINEERING/CONSTRUCTION 7%
HEALTHCARE 6%
SHIPPING/DISTRIBUTION/TRANSPORTATION 6%
DATA HOLDERS

As with service providers, data holders also primarily operate within the IT industry. That said, the dominance of IT over other industry segments is far smaller than for service providers. A significant share of European data holders also come from Government / Public Sector; whilst Singaporean data holders originate from Oil / Gas / Utilities and Retail segments. USA data holders align to the global averages with further focus on insurance and accounting.

The majority of data users come from similar industries to data holders, although banking / financial / investment management is less prominent, and non-grocery retail is within the top five. Outside the leading five, key sectors which are prominent for data users are the public sector, automotive / aviation / marine and healthcare industries. Each of the industries account for 5% of the respondents.

WHO WORKS IN THE DATA ASSURANCE SPACE?

Data assurance persona profile

© Metia Group – Market Demand for Data Assurance Services report – May 2023
Across the supply chain, data assurance professionals tend to work for mid-to-large sized companies ranging from 51–5,000 employees.

Within the service providers segment, 23% of respondents work in companies employing between 501 and 1,000 employee.

The data holders and data user segments have a higher share (23% and 24% respectively) of respondents working for larger enterprises of 1,000–5,000 employees.

Micro-companies of up to five employees do not form a large proportion of respondents, whilst companies in the next category (with 5–50 employees) are weighted towards the data holder segment.
DATA HOLDERS AND DATA USERS ARE TYPICALLY IN ORGANISATIONS EXCEEDING $1M IN REVENUE

15% of the global respondents indicated that they work in organisations with more than 100m in annual revenue (in their respective local currencies). 14% of service providers report revenue within this range, as do 13% of data holders and 18% of the data users.

Companies turning over 1m–5m is the second-largest segment with 14% of global respondents. This is the highest segment of revenue reported by service providers (accounting for 17% of respondents). 14% of data holders are in this revenue range, with 11% for data users.

The third-largest segment is 5m–10m companies, where 13% of global respondents reside. This is a revenue segment where a higher proportion of the service providers and data holders reside.

Source: Metia, Data Assurance Survey
Q: Please indicate the turnover of your company in local currency? Please select one answer, N=791
INFORMATION TECHNOLOGY IS THE LEADING INDUSTRY SECTOR, WITH SERVICE PROVIDERS TYPICALLY SMALLER BY REVENUE IN THIS SECTOR THAN DATA HOLDERS AND DATA USERS

Service providers
38% of global respondents who indicated that they work within the IT sector come from companies with 1m–10m annual turnover.

Data holders
29% of global respondents who indicated that they work within the IT sector come from companies with 50m–100m+ annual turnover.

Data users
Global respondents working within the IT sector indicated three equally important company sizes: 19% of respondents work for 100m+ companies, 19% for 25m–50m companies and 19% for 1m–5m companies.

Source: Metia, Data Assurance Survey
Q: Please indicate the industry you work in. Please indicate the annual turnover of your company in local currency. Please select one answer, N=202
MATURE ORGANISATIONS ARE MORE PROMINENT ACROSS THE SEGMENTS, AND LIKELY TO BE EARLY ADOPTERS OF EXTERNAL DATA ASSURANCE

Whilst external data assurance is a relatively new field, it is established organisations which are more likely to be working with data for external use.

Companies with over 10-years tenure are by far the leaders in the field across the supply chain.

Combined with the finding that 20% of organisations operate in the Information Technology sector, this indicates that IT segments are more likely to adopt and adapt to the new demands of data assurance practices.

Younger organisations are less prominent across all the data assurance sectors, but those established in the 3–5-year age range are more prominent in working with data for external only use.
Across all three data assurance segments, the top-3 titles those responsible report into are: CIO/CTO (31%), CEO (19%) or COO (13%). This highlights the importance of data assurance to the c-suite in the organisations surveyed.

ASSESSMENT OF DATA ASSURANCE MARKET THROUGH THE SUPPLY LENS

DATA ASSURANCE SCOPE AND REACH

DEEP-DIVE INTO EXTERNAL DATA ASSURANCE OFFERING

MARKET DEMAND AND WHITE SPACES

ATTITUDES TOWARDS PARTNERSHIPS
DATA ASSURANCE PROVIDERS TYPICALLY HAVE LIMITED GEOGRAPHICAL SCOPE, CATERING TO A SINGLE OR A FEW COUNTRIES

1-in-3 service providers offer services locally, catering to customers within a single country, which typically is the country of data assurers’ establishment.

The majority of service providers target customers within a few countries, but do not extend their offering to the whole region, primarily targeting their home country and immediate neighbours.

As such, 86% of UK, German and French respondents indicated that their companies target customers within Western Europe; 93% of US respondents recognised North America as the focus region and 83% of Singaporean counterparts cater to Asia Pacific customers.

Despite globalisation and world-wide reach of technology, data assurance is currently a largely localised industry.

60% North America
69% Western Europe
26% Latin America
40% Eastern Europe
19% Middle East and Africa
18% Asia Pacific
THE MAJORITY OF PROVIDERS OFFER DATA ASSURANCE AS PART OF A WIDER PORTFOLIO OF SERVICES

The largest segment — 46% of respondents — report that data assurance generates between 20% and 49% of the company’s turnover.

Just over a quarter of data assurance providers offer data assurance service as their only or major sales generating proposition.

The majority of participants offer data assurance services as an additional service/product. For 28% of respondents, such a business model means that the data assurance function is a supporting business activity, generating less than a fifth of their sales.

This portfolio composition is indicative of how data assurance is emerging, especially amongst the dominant IT service providers.

ATTITUDES TOWARDS PARTNERSHIPS

DEEP-DIVE INTO EXTERNAL DATA ASSURANCE OFFERING
EXTERNAL DATA ASSURANCE IS A SUPPLEMENTARY OFFERING TO A WIDER DATA ASSURANCE PORTFOLIO

Only 4% of service providers focus exclusively on the assurance of external data. The majority offer a blend of data assurance for internal and external uses, with external data assurance currently considered as supplementary to their core business.

This is changing, however, as 40% of respondents believe that external data assurance is a business line that is gaining momentum, generating between 5% and 10% of company’s data assurance revenue.

An additional 40% find that their external data assurance activities are now developed and have reached stable growth, accumulating 10% to 20% of data assurance revenue.

Those for whom external data assurance generates over 20% of the business’ revenue remain in a minority.

© Metia Group – Market Demand for Data Assurance Services report – May 2023
STRONG GROWTH IS ANTICIPATED IN THE NEXT FIVE YEARS

98% of service providers believe that the external data assurance market is set to grow in the next five years. 40% of the sample expects to see double-digit growth, whilst 30% forecast more moderate growth in strong single digits.

Only 13% of service providers expect to see exponential growth in the near term, with the main reason cited for pessimism being the perceived deteriorating general economic outlook.

Only 2% of service providers, however, expect the current economic climate to cause a decline in the provision of external data assurance.

THE KEY INDUSTRIES SERVICE PROVIDERS SELL THEIR EXTERNAL DATA ASSURANCE SERVICES TO

- Overall
- Energy
- Retail
- Healthcare
- Consulting
- Manufacturing
- Accounting/Auditing
- Engineering
- Data Standards Organizations
- Banking/Financial
- IT

Service providers believe that increasing the sophistication and pure volume of data that organisations use in their daily operations, layered with stricter regulatory environment in terms of data privacy and security, will lead to increasing demand for external data assurance services.

Providers also expect automotive, retail and media industries to gain appetite for their services.

Service providers identify a number of areas where current provision is not meeting market demand for external data assurance.

39% of service providers believe that the biggest white space lies in assuring the quality of external data, as the market demands reliability and credible data.

This leads to the next biggest opportunity, external data exploitation, supported by 34% of the sample, whereby service providers assure the quality of insight developed on the basis of external data and preparation for decision making.

This is closely followed (32% of the sample) by data governance, focusing on assurance of external data consistency and management in line with set regulations and procedures, enabling trust and reliability.

DATA HOLDERS UNDERSTAND THE IMPORTANCE OF EXTERNAL DATA ASSURANCE AND ARE READY TO INVEST

Nearly a quarter of the data holders sampled estimate that the size of their organisation’s budget for external data assurance between 100 and 250K (in their respective local currencies). This is a considerable investment, showcasing that data holders are consciously making steps towards improving data sharing.

32% of them allocate a smaller 10K to 100K budget for their external data assurance needs.

Only 5% of the sample estimated their external data assurance investment at over 1m. Given that the majority of data holders are operating at the local level (rather than regionally or globally), this is likely to limit the number of organisations able to invest at the 1m+ scale.
INVESTMENT INTO EXTERNAL DATA ASSURANCE IS PREDICTED TO RISE IN THE NEAR-TO-MID TERM

DATA HOLDERS’ PREDICTIONS OF FUTURE INVESTMENT

Despite concerns over the economic climate globally, only 2% of data holders anticipate that their organisations will moderately cut their external data assurance budgets in the next 5 years, whereas a further quarter of organisations expect their investment to remain stable, with no significant change to budget size.

Almost three-quarters of respondents are optimistic that the investment in external data assurance will grow in the near-to-mid term. The majority — 60% of data holders — expect to see a moderate increase in investment over the next five years (an increase somewhere between 1% and 20% year-on-year). 12% of respondents are more optimistic still, with estimates of investment by their organisation increasing more than 20% per annum.

Q: What are the key external data assurance pain-points/challenges that your organization experiences today? Please select all relevant answers, N=237

© Metia Group – Market Demand for Data Assurance Services report – May 2023
A significant segment of data users believe there is scope for an expansion of external data assurance solutions.

Attitudes towards supply efficacy and accessibility

- **Yes, there are products/services addressing a few key problems, but not all of them**: 39%
- **Yes, there are accessible products/services addressing all of the key demands**: 34%
- **Yes, there are products/services addressing key problems, but they are too expensive for us to afford them**: 18%
- **No, the data assurance proposition is not yet developed and does not address key pain-points**: 9%

Only 9% of the sample consider data assurance supply as either non-existent or significantly underdeveloped.

The majority, however, (91% of respondents) report that provision of external data assurance already exists in some form. Approximately three-quarters of respondents report that the market is providing relevant products/services that addresses the current needs of data users.

Affordability is an issue reported by 18% of data users, with the range of external data assurance products not accessible because it is beyond their organisation's budget.

The largest segment — 39% of data user respondents — report that whilst the data assurance market is currently addressing a few of their key problems, there remain gaps in the solutions provided by the market.

Key issues driving these gaps in the service provision include: new legal requirements increasing amounts of data organisations are using which are external, and improving technology which is allowing for increased flows of data externally.

Whilst this is creating new opportunities on the demand side, increased supply-side solutions have yet to emerge. There is also some concern expressed around the lack of professionals entering the industry.

Source: Metia, Data Assurance Survey
Q: In your organization, who has the decision-making authority when it comes to choosing external data assurance products/services your company uses? Please select one answer, N=237

© Metia Group – Market Demand for Data Assurance Services report – May 2023
The largest segment of data users — 19% of respondents — estimate the size of their organisation’s budget for external data assurance is between 50K and 100K (of their respective local currency). 43% of data users report a budget above 100K, with 6% of these respondents claiming a budget of more than 1m. On the whole, however, the average external data assurance budget for data user organisations is below that of data holders.

14% of respondents reported that their organisations do not have budget allocated to data assurance services. The majority of these companies are small, generating less than 100K in annual turnover, limiting their ability to invest in anything other than directly sales related functions.
DATA USERS EXPECT TO EXPAND THEIR INVESTMENT IN EXTERNAL DATA ASSURANCE OVER THE MID-TERM

DATA HOLDERS' PREDICTIONS OF FUTURE INVESTMENT

The majority of data user respondents estimate growth in external data assurance investments by their organisations over the next five years. 63% anticipate a moderate increase in budgets (of up to 20% a year) during this period, and a further 13% of respondents foresee more significant growth (more than 20% a year). Combined this means that over three-quarters of data users see growth in investment, despite recent news of a potential global economic downturn.

Largely citing this difficult economic climate, around 4% of the data user respondents anticipate that their organisations will cut external data assurance budgets in the next 5 years. Three-quarters expect only a moderate decline (a drop of less than 20% a year), whilst the remainder estimate more significant cuts (a drop of more than 20% a year).

One fifth of data users estimate that their organisation’s budget for external data assurance will remain stable over the next five years. This demonstrates a limited amount of pessimism in the market, and underlines a commitment by data users to external data assurance in relation to other investments.

THE GLOBAL DATA ASSURANCE MARKET IS ESTIMATED BY PARTICIPANTS TO BE CURRENTLY WORTH ~$3.5BN US DOLLARS

The majority (6 in 10 respondents) who were able to express an estimate believed the size of the global data assurance market in 2022 to be somewhere between $2bn and 4bn US dollars. There was little consensus among the remainder of market participants, with a variance of between less than $1bn to between $10bn and $15bn.

A quarter of respondents were unable to place a value on the market’s size, perhaps reflecting those in the survey who were operating at the local market level, were non-providers of data assurance services and had limited visibility of the global market.
85% of respondents expect the external data assurance market to grow in the next five years. The majority (62%) of the sample expect either moderate growth or dynamic growth during this period, which estimates growth in the range of 5% to 15% year-on-year.

The drivers behind this growth include:
- Increasing market demand resulting from a higher volume of data managed by organisations
- Ever-evolving technological capabilities, bringing new solutions to the market
- Increasing pressure from regulators, starting with privacy laws (like GDPR) as well as wider requirements to share data across organisations to achieve better outcomes which are credible and reliable

There is only a limited amount of pessimism, with only around 8% of respondents expecting the market to remain static, and a further 7% expecting a decline. The main reasons cited for this negative sentiment is the prospect of a global economic slowdown, which will limit organisations ability to invest in innovation.

SOURCE: Metia, Data Assurance Survey
Q: In your opinion how will the global external data assurance market grow in the next 5 years? Please select one answer, N=791

© Metia Group – Market Demand for Data Assurance Services report – May 2023
Increasing demand from market participants to exchange and share data that is only possible if data quality and trustworthiness is intact

Developing technology landscape makes it possible/easier/cheaper to introduce data assurance into external data exchange processes

Increasing pressure from the regulators to establish data trustworthiness through assurance services

Increasing initiatives that encourage open data sharing (e.g., open banking) and the use of API-based consumer services

© Metia Group – Market Demand for Data Assurance Services report – May 2023
WHAT IS THE STATE OF DATA ASSURANCE MARKET?
DATA ASSURANCE MARKET IS SET TO REACH $5.6 bn USD by 2027

Taking the range of the respondents’ views into account, the weighted average value of the data assurance market in 2022 amounts to $3.5bn USD.

In a similar fashion, the growth is expected to reach 7.9% CAGR over the period of 2022–2027.
Currently, assurance of external only data flows remains a niche section of the market. 98% of respondents agree that the exclusively external data assurance segment comprises just 3% of the market. Similarly, exclusively internal data assurance also has limited appeal, winning just 6% of the total market.

The largest section of the market is currently in the assurance of data that is meant for internal use, but can be shared externally. This is considered by respondents to account for an estimated 80% of the market. Currently, this market is concentrated on the assuring of internal data which is primarily for internal use. There is a movement towards preparing this data for use outside the organisation, driven by industry developments such as the push towards open banking, GDPR and other privacy laws affected industries, such as retail, as well as a wider push towards sharing data by regulators and public sector.

WHAT IS THE STATE OF DATA ASSURANCE MARKET?

SURVEY-BASED ATTITUDES

GLOBAL MARKET STATE

BUDGET ALLOCATION

INSIGHT BY SEGMENT
DATA ASSURANCE ANNUAL OUTSOURCING BUDGET MOST COMMONLY RANGES FROM 50K to 500K (IN LOCAL CURRENCIES)

Eliminating the ‘Don’t knows’ from the sample, 92% of respondents confirmed that their organisation already has an allocated budget for data assurance.

Over half indicated that their data assurance third-party budget stretches from 50K to 500K (in respective local currency), with 21% of respondents narrowing the range of budget to between 100K and 250K.

On a global level, organisations are more likely to have a budget below 50K than above 1m, which is partially an indication of the smaller size of organisation currently active in the market for data assurance.
ORGANISATIONS TYPICALLY ALLOCATE EXTERNAL DATA ASSURANCE BUDGETS IN-HOUSE

Over half of respondents (55%) estimate that between 6% and 20% of their organisation’s external data assurance budget is spent on purchasing products/services from third-party providers. This compares with 26% who estimate their budget share is above 20%, and only 5% above 60%, for third-party provision.

The majority do however spend at least some of their budget externally, with only 7% spending 98% to 100% of their budget in-house. Over two-thirds of respondents (67%) selected the range between 80% to 94% of spend on in-house provision, meaning just 6% to 20% was spent on third-parties.

Source: Metia, Data Assurance Survey
Q: To the best of your knowledge, please estimate how the investment your organization dedicates to the external data assurance products/services is allocated between internal (in-house) efforts and third-party support. Please select one answer, N=791

THERE IS A BROAD CONSENSUS BETWEEN SERVICE PROVIDERS AND PURCHASERS ON THE SIZE OF THE GLOBAL MARKET

There is a synergy in the range of valuations given by service providers, data holders and data users in terms of estimates in market value. **30% of each category values** the current market at between $2bn USD and $3bn USD.

**16% of data holders** believe that the market is currently more developed and reaches between $3bn USD and $4bn USD. Service providers and data users are slightly more cautious about this valuation with **13% of each segment** supporting this.

**10% of the service providers** believe, however, that the market is larger, in the range of **between $4bn USD and $5bn USD**.

GROWING USE OF EXTERNAL DATA BY ORGANISATIONS IS EXPANDING DEMAND FOR ASSURANCE SERVICES AND THE STANDARDS NEEDED TO PROVIDE MARKET CONFIDENCE

KEY INSIGHTS FROM THE MARKET SURVEY

1. Growing use of external data by organisations:
   - There is increased complexity around the types of data organisations use and how they use it. This has led to a blurring of the lines between what can be considered internal data, and whether it has applications for external usage.
   - External data use has created a challenge around credibility and trustworthiness in external data flows.
   - Regulatory requirements have increased alongside the greater use of external data, with compliance now a key concern amongst data holders and data users.

2. Increased demand for data assurance which addresses the challenges caused by increased external data flows:
   - Consensus view that the global market for external data assurance will grow 60% in the next five years, albeit with regional variations.
   - Organisations on the demand side are requesting a more agile response to their growing needs from the data assurance industry.
   - Requirement to close the gap between what is currently being provided by the market and the priorities of data holders and data users.

3. Clear requirement for ‘rules of the road’ to increase market confidence in external data assurance:
   - Data holders and data users want to increase the trustworthiness of their organisations to external stakeholders.
   - Service providers recognise the need for transparency in standards and the quality of delivery of external data assurance.
   - A consensus exists both on the demand side and the supply side that an independent standards body and/or code of conduct is required to improve confidence of organisations in how they use external data.
INTERNAL DATA IS INCREASINGLY REQUIRED TO BE READIED FOR SHARING OUTSIDE THE ORGANISATION, GROWING THE MARKET FOR EXTERNAL DATA ASSURANCE

Whilst data exclusively for external use is expected to remain niche, data holders are increasingly needing to prepare data for use outside of their organisation, and data users need to increasingly work with external data. Both therefore see a need for enhanced external data assurance services, whether it be for regulatory, auditing or other business purposes.

Demand is also driven by increases in the volume of data organisations are using in their day-to-day, with appreciation of the need for sustainable usage and re-usage of data generated by other entities. Assurance is required to establish trustworthiness, with additional pressure from regulatory bodies on compliance.

DATA ASSURANCE PRODUCTS/SERVICES USED (%DATA HOLDERS & DATA USERS)

- Assurance of internal data that might be shared outside, 57%
- Assurance of data that is intended for external sharing, 36%
- Exclusively external data assurance, 29%
- Internal & external data assurance, 22%

SUPPORTED BY THE INCREASING REQUIREMENTS AROUND THE EXTERNALISATION OF DATA, A 60% RISE IN THE GLOBAL DATA ASSURANCE MARKET IS ANTICIPATED IN THE NEXT FIVE YEARS

Global data assurance market size in value terms in 2022: $3.5bn USD

Global data assurance market size in value terms in 2027: $5.6bn USD

Source: Metia, Data Assurance Survey
The IT sector accounts for the leading segment of dedicated external data assurance providers, yet a high number of in-house capabilities in banking, manufacturing, healthcare and shipping industries, makes these industries prominent too on the supply side.

Data assurance specialists are currently only a minority of the personnel working on the supply side, with technical specialists — including IT and data management and transformation job functions — the majority providers.

Data assurance teams typically report into the c-suite, meaning that the CEO, CTO and CIO are the main decision-makers. The Data Protection Officer — whilst solely responsible for compliance — is not always included in revenue-generating decisions.

The IT sector is the leading industry segment for data holders and data users, but is not as dominant as it is for the service providers on the supply side. There is alignment with the other top industries demand respondents work in, although education is 5th in place of shipping / distribution / transport.

Given the often sensitive nature of the internal data, assurance is mostly provided by in-house personnel within demand sector organisations. The workforce behind external data assurance consuming industries skews towards Millenial males, holding technical and analytical roles, including IT, data management, data protection, data engineering and data analytics.

External data assurance buying cycle can be lengthy, and goes beyond basic pricing procurement. The ultimate decision-making power typically rests with the CEO, CTO and CIO within demand-side organisations.
DATA HOLDERS AND DATA USERS STAND READY TO INVEST IN DATA ASSURANCE IN ORDER TO SECURE TRUSTWORTHINESS IN EXTERNAL DATA FLOWS

37% of data holders and data users allocate between 50K and 250K of their annual budget to external data assurance

53% of data holders and data users allocate between 6% and 20% of their budget to third-parties

External data assurance is a recognised business need amongst data holders and data users, with a high proportion of organisations already allocating budget for assurance services. Naturally there is variation on the scale of budget allocated, based on industry sector and organisation size.

Whilst external data assurance remains heavily executed by in-house teams, over half of organisations seek outside help for at least some elements of the process.

In the market currently, however, only 5% of organisations dedicate more than 60% of their allocated budget to third-parties.

© Metia Group – Market Demand for Data Assurance Services report – May 2023
SCOPe FOR SUPPLY-SIDE DEVELOPMENT IN THE MARKET FOR EXTERNAL DATA ASSURANCE SERVICES, AS PARTICIPANTS FORESEE REGIONAL GROWTH OPPORTUNITIES

CURRENTLY NICHE HIGHLY DYNAMIC MARKETS

The currently nascent and niche markets of Eastern Europe, Latin America and the Middle East and Africa promise exponential growth opportunities for external data assurance suppliers. Currently these markets have limited competition on supply side, with an opportunity for dynamic market development.

SIZEABLE MARKETS WITH STABLE GROWTH

The more developed regions of North America, Western Europe and APAC provide markets with stable growth, and with opportunities to tap into established more advanced markets in data assurance provision. These markets typically have greater competition amongst service providers, which will increasingly need to offer streamlined and flexible solutions which meet market demand around data trust, compliance and governance.
Both supply and demand side of external data assurance agree that **data quality control, data governance and data compliance are the top-3 priorities.** A gap exists, however, on the importance of these products/services. Whilst 50% of service providers regard quality control and governance as being important, it is less than a third for data holders and data users.

**Data exploitation, data interlinking and data sharing see an inverse relation between supply and demand,** where a greater number of product/service consumers regard it as a priority compared to service providers.

This is particularly evident with data exploitation, where the demand side recognises it as the 4th biggest challenge in terms of external data assurance, providers only rank it as 7th.

An opportunity exists for service providers to better understand the priorities of the data holders and data users in their challenges around external data assurance and how these are marketed to suit their needs.
FASTER AND MORE FLEXIBLE REACTION TO MARKET NEEDS IS REQUIRED OF DATA ASSURANCE SUPPLIERS

Majority of data holders and data users agree that current external data assurance service provision needs development in order to fully meet the needs of the market.

This is partially due to the volume of demand for products / services is outpacing supply, with technological development also making solutions feasible before service providers can provide them.

Data holders and data users are also demanding more tailored solutions which fit industry specific or technological / automated requirements (such as APIs, for example). More agile products / services are needed too, with bespoke pricing structures to make them more accessible to smaller organisations.

66% of data holders and data users believe that data assurance supply does not fully meet their needs.
As the key motivation behind engaging in external data assurance is increasing trust in data and improving data quality. Both data holders and data users want to improve the trustworthiness of their organisation to external stakeholders, be they direct partners and consumers, investors or the wider market.

The more organisations engage externally, there is a requirement that data is assured to a recognised standard which ensures credibility and trust.

Both the supply and demand side agree that official recognition by a code of conduct or standards body would boost suppliers’ profiles and increase consumer confidence in their products / services. Some of potential routes into such recognition include partnerships with an official code of conduct body, such as the ODI, a product certification, and / or process accreditation.
DATA PRIVACY & SECURITY AND DATA GOVERNANCE ARE MORE PROMINENT AMONG ORGANISATIONS PROVIDING COMBINED INTERNAL & EXTERNAL DATA ASSURANCE SERVICES

THE RANGE OF EXTERNAL DATA ASSURANCE SERVICES (COMBINED SERVICE PROVIDERS ONLY)

Product / services responsible for data sharing (e.g., setting up processes for data management across multiple ecosystems, assuring data consistency, traceability and quality)

Product / services putting data to use (e.g., setting up processes helping companies identify and mitigate any activities that compromise data integrity and drive confidence up)

Product / services directed at data privacy and security (e.g., setting up processes for managing malicious data access or manipulation, in order to assure regulatory compliance)

Product / services improving data quality (e.g., setting up processes increasing data accuracy and creating insights)

Product / services targeting data compliance (e.g., setting up processes assuring the quality and status of the data)

Product / services aiming to improve data governance (e.g., setting up processes for data governance, data quality management and data sharing)

Q: What sort of data assurance products/services does your organization use? Please select all relevant answers, N=414

- Exclusively internal data assurance products/services (for example, data transformation, data processing and data analytics of data generated by the client, which is not shared or used externally)
- Data assurance products/services for internally focused data that might be shared into the market (for example, auditing data, GDPR or other data standards compliance data)
- Data assurance products/services for externally-focused data that is intended for external use (for example, industry-specific metadata compliance, software verification)
- Data assurance products/services for external (third party/open) data that is exclusively intended for sharing outside of the organisation (for example, open data quality assurance, data comparison, data exchange)
- Combination of internal and external data assurance solutions

ABOUT METIA

Metia Group is a global technology marketing consultancy with offices in London, Seattle, Austin, and Singapore. We employ some 100 professionals; each is an expert in a particular specialization.

Our clients include both the largest tech corporations and ambitious growth businesses. We provide them with structured research and marketing programs that reach across geographies, scale massively, can be deployed systematically, and are measured relentlessly.

Metia has specialist services designed to support tech clients in the areas of Research & Insight, Demand, Content, and Advocacy. These services are based upon deep expertise and proven methodologies, and enabled by unique tools and systems.

The Metia Insight team comprises strategy, research, analytical and data science experts. Metia Insight undertakes both ad hoc and ongoing research activities to help our clients understand their markets and audiences in order to better focus business strategy, product propositions and audience engagement.

To learn more about our capabilities and discuss how we could help you understand and engage your target audiences with focused, structured and measurable programs, please visit www.metia.com or contact steve@metia.com.
